Hybrid seminar/Online course

Design perfect light

The *Expert for Lighting Design* focuses on light.

Learn to analyse architecture, to consider the use of space and human needs and to design optimal lighting. You work on realistic projects with pen and paper. In our laboratory you will experience the effectiveness and effect of light yourself.

We train you for all stages from the concept to the presentation and implementation. The hybrid seminar takes place at the same time with face-to-face and online participants. As online participant you are connected live and will be actively involved.

Furthermore you have the possibility to learn comfortable by yourself. Look over the shoulder of our trainers in various videos. Watch them working on a project with pen and paper and learn from their impressive demos filmed in the DIAL experience lab. Exercises help you to consolidate what you have learned.

Hybrid seminar

Online course

Online course

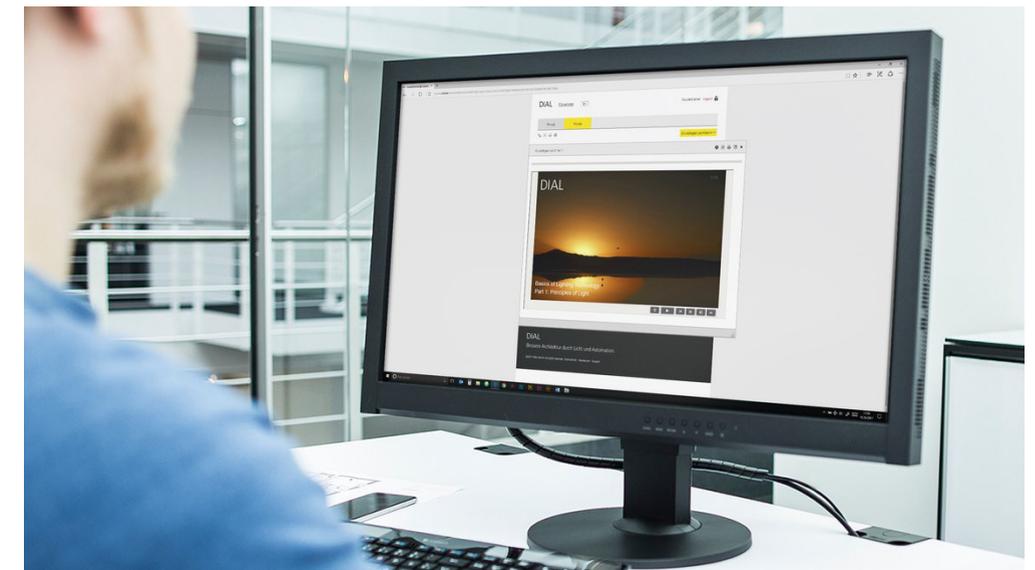

Learn the basics of lighting technology

Basics of Lighting Technology raise awareness for light and the quality of light. They provide clear and compact knowledge for all those who deal professionally with light, e.g. reading and understanding of photometric data, developing a basic understanding for lighting concepts and being aware of the most important aspects to consider when selecting luminaires.

Learn more

- i* *Basics of Lighting Technology is divided into three modules which can be booked separately:*
- Principles of Light*
 - Lamps and Luminaires*
 - Lighting Design*

After successful completion of all modules you will receive a certificate.

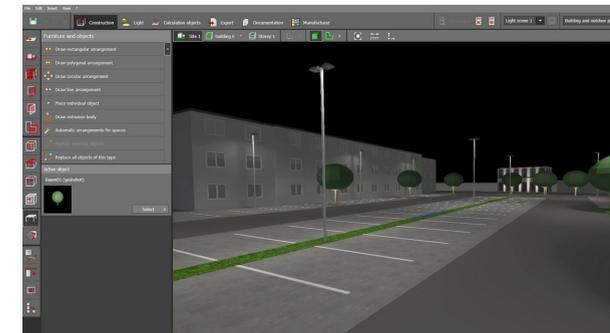

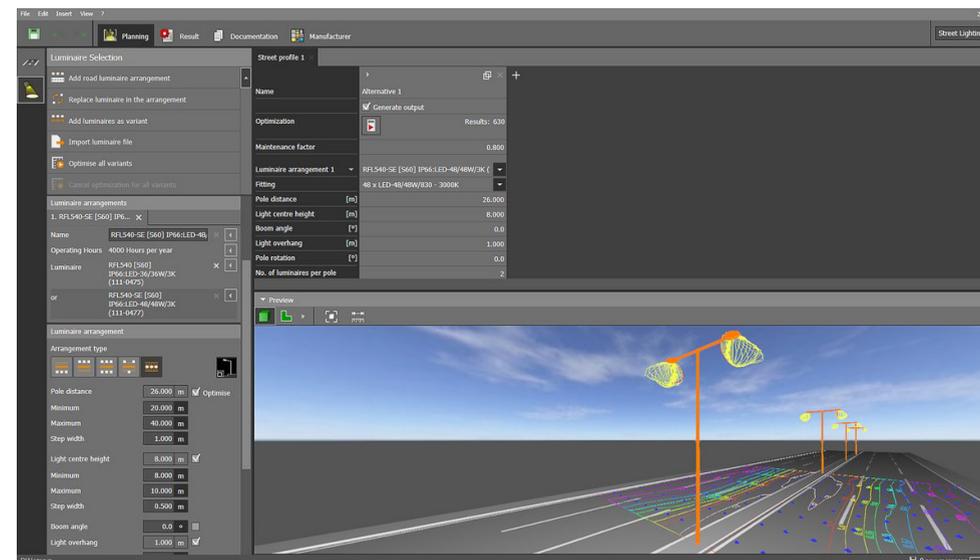

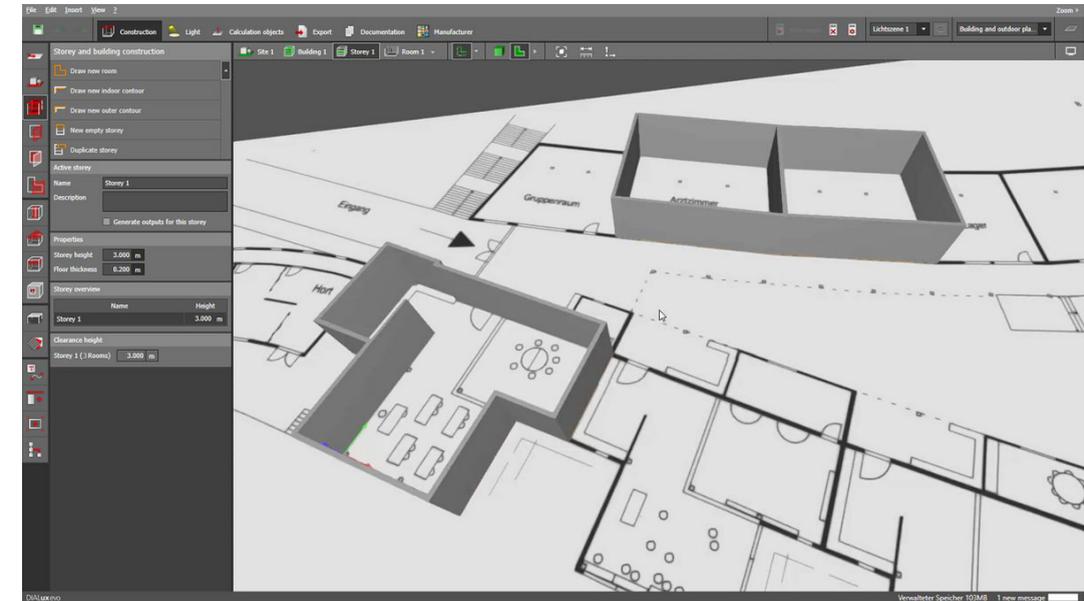

Online course
